

EDUCATION

University of Colorado Boulder

MS, Computer Science

(focus on Intelligent Systems)

Expected, May 2023 | USA

COURSEWORK

Graduate

(Fall'21)

- Design and Analysis of Algorithms
- Natural Language Processing

(Spring'22)

- Distributed Systems
- Neural Networks and Deep Learning

(Fall'22)

- Advanced Data Structures
- Network Systems
- Database Systems

(Spring'23)

- Introduction to Blockchain
- Probabilistic Graphical Models

SKILLS

(Programming Languages)

- NodeJS | TypeScript | Python
- Rust | C++

(Development | Automation)

- Ansible | Kubernetes | Git | Linux
- GraphQL | gRPC | Protocol Buffers
- Test Automation | PyTorch

(Database)

- MySQL | InfluxDB | MongoDB
- Graph Database (Neo4J) • Redis

(Distributed Systems)

- Kafka | Mesos | Ceph | HDFS
- Graylog | Spark

EXPERIENCE

PayPal | Software Engineer Intern

May 2022 – August 2022 | New York City, USA

- Migrated a GraphQL backend service boilerplate from JavaScript to TypeScript for strong type-safety.
- Enhanced static type checking for GraphQL resolvers based on Schema-first design philosophy.
- Saved hundreds of developers' hours across the engineering team.

LG Ads | Senior Software Engineer

June 2017 - June 2021 | Bangalore, India

- 5x improvement in latency from optimizing business-critical data distribution network (ACR) enabling more granular business insights.
- Improved customer SLAs, as lead architect on key platform infrastructure projects which streamlined debugging, monitoring and deployment of microservices.
- Tech stack involved: HDFS/Ceph and Mesos/Spark as distributed storage and compute cluster, Graylog-based log pipeline, Telegraf/InfluxDB for application metrics collection, Kubernetes for application deployment, HaProxy for high-availability and load-balancing of the critical services with Ansible for infrastructure deployment automation.
- Saved hundred data scientists hours/week for the Data Science team by setting up Kubeflow-based Machine Learning pipeline.
- Ran experiments to evaluate and fine-tune contemporary state-of-the-art pre-trained speech recognition models on an internal data lake.

Google | Google Summer of Code

April 2016 – August 2016

- Contributed to Coala —static code analysis FOSS—in Python, under Python Software Foundation. Developed "coala-html" application —AngularJS application to display results from Coala, as an interactive web page.
- Incorporated test-driven development with 97% code coverage for AngularJS and 100% for Python codebase, test automation and wrote code documentation as recommended software development practices.
<https://github.com/coala/coala-html>.

Europython | Speaker

July 2016 | Bilbao, Spain

- Presented a session on "Guide to make an open source contribution", using Git, CI/CD pipeline at EuroPython — an annual International Python Conference in Europe. Participants made real time contributions to the Coala project.

OPEN SOURCE PROJECTS

- [Network Systems Final Course Project](#) (Author, 2022) Medium-size scalable distributed system for a Real Time Streaming service based on a Spanning Tree topology.
- [IGit and GitMate](#) (Contributor, 2016) —Contributed bug fixes and new feature to predict bugs' rank in GitMate —an automated code review and issue triaging platform for GitHub projects.
